Wastewater Treatment Plant Project May Generate Loud Noise in the Surrounding Areas

Beginning the week of July 8th, contractors began the installation of "sheet piling" at the Wastewater Treatment Plant located at 2005 Old Chappell Hill Rd. Sheet piling is the process of wedging steel sheets into the earth to provide protection from bodies of water and aid in the prevention of erosion. The steel sheets are driven into the ground by impact hammers, which will generate some noise. The project is expected to take approximately 60 days. The City of Brenham wants to thank the community for their patience during this project.

If you have any questions, please call the City of Brenham at 979.337.7400.
